CLIFF PROPERTY A STEADY PRODUCER

Company at Ophir Meeting With Great Success in Opening Mine.

IS SELDOM HEARD OF IN LOCAL CIRCLES

Nothing but Shipping Ore Results From the Work Being Done.

Seldom is there any mention of the Ophir district of Utah. And seldom do reading circles learn anything regarding the active properties in this quiet but accomplishing camp A. L. Kern, a capitalist of Milwaukee, and Kern, a capitalist of Milwaukee, and one of the heavy stockholders in the Cliff Mining company of the Ophir section, is in Salt Lake from the East. This is one of the several visits to this State Mr. Kern makes each season, and during his present stay here he has been over to Ophir for the purpose of going through the Cliff property. His inspection recently made was productive of great gratification, and he stated Tuesday that he had every confidence in the Cliff possessions.

The present company has been at

The present company has been at work for some time placing the property into shape for producing. This campaign of development work has consisted in part of sending the tunnels deeper into the bills and in placing a transway into condition for work. This letter accessory is performing its task transway into condition for work. In a latter accessory is performing its task without a hitch, and he states that from fifty to sixty tons of ore each day are being sent into the local smelters. Mr. Kern pointed out that the Cliff company was one of those fortunate organiza-tions which found its ores to be such an average grade as to allow their direct consignment to market without any preliminary treatment.

He also points out that as the pres-ent workings seek greater depths than any heretofore gained, the ores are being maintained both as to value and extent in such a manner that there can be no doubt of the long and continued nacitiness of the property as a liberal producer. A winze from the lower tuning, for instance, is searching 100 feet deeper than any ag, and the showing there in any other portion of the company's domain. Three working tunnels with their various lateral aveigh ground are being con-all possible speed, and the present shipments are coming from several different paris of the property.

Mr. Kern has other extensive Utah mining interests, and he will be in the city for several days yet.

BASIS OF ORE SETTLEMENTS. Sub-Committee of Mining Congress Handling Important Question.

Handling Important Question

For the purpose of standardizing as far as possible the settlements for ores inroughout the mining country. Harry S. Joseph and George W. Riter, the subcommittee of the general committee appointed by the American Mining congress on the mutual relations and grievances of the ore producers and custom smelters, have formulated a series of questions for distribution to all producers of precious rock. This series of questions goes into the system of settlements on all metals, and the congress will see to it that all producers secure the same. The answers are expected to show a great variety of methods of ore settlements, and will serve to open a way for a more equitable hasis where the same is required. It may be stated that the smolting conditions in that has caused ove to be sent to the local market from all over the West. It is generally appreciated that Solt Lake presents the best open market of the country. There are certain reforms however, that will result in time even here, and no better way of benefiting all producers to get interested tooth and toe nall in the Mining congress.

Bastern Financial Circles Are More

Eastern Financial Circles Are More
Optimistic Over Future

Whichever way the direction of the financial wind is gauged in the East, conclusions happen at this time to fall very close together. There were on Tuesday at least four different offices in Salt Lake City with Eastern connections, that received most encouraging word from the East regarding the looks of things generally. Each source of information seemed to have noticed the same straws floating through the air, for each one predicted that the conditions prevailing for the past several weeks would be immensely improved during the next fortnight.

mensely improved during the next fortnight.

From Boston, New York and Cincinnati came assurances that the financial atmosphere was clearing up splendidly. One went so far as to predict that within fifteen days the inscrease in confidence and the upward trend of the markets would be as pronounced as the present uncertainty and low temperature financially. Money is said to be easier, and that conditions have been exaggerated by those who hold the purse strings of the country. Local circles naturally feel very much encouraged over such ptedictions, especially as they come from several independent sources. The tenor of the expectations may be well founded, and the impression is gaining ground here that the bedrock of slumping stocks and confidence has been reached.

Ore Shipments.

The Pioneer sampler on Tuesday re-leased the following number of cars of ore: Utah, 9; Montans, 1. The Taylor & Brunton company released the following: Utah, 17; Nevada, 3; Ida-bo, 7.

Ore and Bullion.

The ore and bullion receipts for Tuesday, given by McCornick & Co., were as follows: Ore, \$80,000; bullion, \$72,000.

Copies of The Tribune will be found on le in Nevada at the following:

Company Closes Mine During Process of Installing the New Machinery.

John Dern, general manager of the Lower Mammoth Mining company, on Tuesday stated that the company had Warm weather business closed down the property for the purpose prevailed, although several stocks notice-ably stiffened up a bit. During the two of installing new equipment. This work is extremely difficult, for the reason that sessions a total of 48,700 shares of stock the machinery is massive, and must be set into position far under ground. Two weeks or more will be required by the management to accomplish the task, and as a result the regular consignments of ore to the local smelters will be interrupt

ed until this work is completed. Mr. Dern states that the new holsting machinery will enable the company to send the snaft down to as low as the send the snaft down to as low as the 3000-foot level of the mine. That the Lower Mammoth company will sound such depths before very long is merely the logical conclusion necessarily drawn from the present showings. It was not until the 1700-foot level was gained that the real era of presperity of the company was attained, and the work done on that level has demonstrated that the drifts were on top of the banner ore deposits within the organization's lines. With the installation of the new equipment, therefore, and with everything in readiness for operation, the Lower Mammoth will start upon its happlest era. None of its friends have any doubts of the outcome of the present plan of development.

MAY FIND TRUCKS THE RIGHT THING

Nevada Hills Company Is Willing to Utilize Autos if Successful.

EASTERN FIRM NOW LOOKING OVER ROAD

President Rice Deems Trucks the Solution of Nevada's Great Difficulty.

It was learned Tuesday that a representative of an eastern firm, whose business is the manufacture of heavy trucks for freight hauling purposes, was in the State of Nevada making an inin the State of Nevada making an inspection of conditions at or near Fairview for his company. The primary
purpose of this inspection is to ascertain if the utilization of heavy gasoline
trucks is possible in bringing the ores
of the Nevada Mills company from the
mine to the railroad tracks at Fallon.
When asked regarding this report, Winssor V. Rice, president of the Nevada
Hills Mining company, stated that he
understood this representative was
going over the Fairview-Fallon roadway, and the favorable result of this way, and the favorable result of this visit is expected to be the installation of at least a trial truck for the purpose intended.

Mr. Rice stated that the Nevada Hills

Mr. Rice stated that the Nevada Hills company was negotiating with several firms for such freight wagons. The mining company had been brought to the point where something had to be done to relieve the transportation problems. While in New York he saw innumerable heavy auto trucks moving along with great loads of freight, and the idea struck him that the same machine could be utilized by the Nevada chine could be utilized by the Nevada Hills company. All who have traveled the road into Fairview will agree with Mr. Rice that there are very few places in the same where any work will be necessary in order to enable heavy auto trucks to make progress with a load. The Nevada Hills company, however,

does not desire to expend a great many thousand dollars in bringing several trucks to Nevada until the feasibility of the plan has been demonstrated. Mr. Rice feels that the trucks will be a success in the sagebrush state's deserts, and should they turn out to be such he is well enough acquainted with Nevada transportation conditions generally to realize that there will be at least a hundred such trucks in use in Nevada as soon as the manufacturers can get the machines to that State. Mr. Bice feels that they will solve the problems now confronting the mine owner who has a shipping proposition on his hands at so great a distance from the railroad tracks that it is impossible to send the ore into the mar

For many months past the Nevada Hills company has found itself in this very predicament. Teams were difficult to secure, and the ore bins, dumps and the various workings in the property were so congested with shipping rock that development work was found al-most an impossible matter except on a much smaller scale than equal to the ambition of the management. This organization, therefore, will be among the first, if not the first in the State, to adopt the auto trucks for ore hauling. Those who know the subject do not doubt that the trucks will be a complete

TOO MUCH PROSPERITY SAYS HENRY CLEWS

Veteran Financier Attributes Shrinkage of Values to Overdoing of Business.

NEW YORK, Aug. 27.—The shrinkage in Wall street values has already as ceeded \$3.00,000,000,000.000. This salready as ceeded \$3.00,000,000.000. This salready as ceeded \$3.00,000,000.000. This saltened in the salready as ceeded \$3.00,000,000.000. This saltened in connection with policy or his sections in connection with corporations for similar disturbances have taken piece in London and olsewhere. England the saltened in the history of the nation. As a matter of fact, we have been in the history of the nation. As a matter of fact, we have been in the history of the nation. As a matter of fact, we have been in the history of the nation. As a matter of fact, we have been in the history of the nation. As a matter of fact, we have been in the history of the nation. As a matter of property adjoins this been too much business where the management is now making salt Lake City his headquarters. The Weiner Copper map takes in an appeculation. In other words, there has been mainly now being have taken piece, the situation will be a sounder one in the end and all interests will be established on the property of t

reputation to a higher plane, put our securities on a more reliable and honest basis and restore confidence at home and abroad.

The monetary situation, though far from being satisfactory, is gradually improving. No doubt liquidation has enforced sufficient contraction in Joans to materially strengthen the banks and enable the latter to finance the crop and the large business demands of the interior. All accounts from the interior are encouraging. As a result of average crops and profitable prices, there is every prospect of a good market this fall for all staple products, even if the stringency of the money market should enforce a curtailment of new enterprises and speculative operations. There is no doubt that the country would be better off for a moderate recession in general business, so that tension might be relieved and affairs return to the normal; for Wall street is still the storm center and, while the end has apparently not come yet, the thancial situation has been much battered by the decline to a lower and safer level. There is more or less uneasiness in London, Paris and Berlin, where much the asme difficulties are being faced, though less intense. Overdoing is also at the bottom of foreign troubles, and the same cure must be endured; that of liquidation. The Bank of England, slihough it did not advance the bank rate this week, is showing unusual caution, and the foreign demand for gold at this time is guggestive. Considering our own position, it does not seem likely that we can afford to part with any large amounts of gold at this season. We ought to be able to place future grain and cotton bills more freely just now, since it is certain that Europe must take these products in large amounts and pay us good prices for the same. At the same time our imports have been running very heavy, thus offsetting the large excess of exports which has favored us for several years and making it easier for Europe to take our gold.

The credit situation just now is one that calls for calm judgment. A wave of hyste

TINTIC'S NEW SMELTER. Company Is Rushing Things, Says Manager Bela Kadish.

ager Bela Kadish.

The task of placing the premises at Tintic into condition to receive the new smelting plant being erected by Tintic and Provo interests, is being done as quickly as it is possible for human effort to accomplish the trick. This was the assurance given yesterday by Bela Kadish, the builder and manager of the lately completed smelter at Ogden. Mr. Kadish has the work at Tintic under charge, and he has every confidence in the early completion and successful operation of the new plant.

He stated that all the foundations had been put in, and work upon the sampler is so near completion that this portion of the works will be in condition within sixty days to receive ores. The movers of the enterprize are rushing the railroad tracks to the mines of the district, and one engine and some rolling stock are already on the ground awsiting a chance to become useful. The importance of the new plant has not been overestimated in the least, as it will bring means right to Tintics doors for the treatment of ore whose low grade values do not permit direct shipments to the Sait Lake Valley smelting plants.

Mining Notes. D. C. Jackling, manager of the Utah Copper company, spent Tuesday at the new mill at Garfield.

new mill at Garneid.

E. J. Raddatz is in Tintic looking over some properties in which he and associates are interested.

W. H. Bramel, the well-known attorney, will return today from an Eastern trip of several weeks duration.

Col. C. E. Loose came up from Proventies.

Col. C. E. Leose came up from Provo Tuesday for the purpose of attending to several mining matters of importance. J. Fewson Smith of the United States company is back at his desk from a round-up of the camps in which his com-pany has mining properties.
